NAME
[REDACTED] Study: Research for Scleroderma, Myositis, and Polyangiitis

SHORT DESCRIPTION/INTRO (101 CHARACTERS MAX)
Now enrolling adults with scleroderma, myositis, and polyangiitis in a clinical research study.

Details About Study (10,000 CHARACTERS MAX)
Living with systemic sclerosis (SSc or scleroderma), inflammatory myopathy (IIM or myositis), or ANCA-associated vasculitis (AAV or polyangiitis), can impact many parts of daily life. The [REDACTED] study is exploring a potential new cell therapy for adults with these conditions. This clinical research study is designed to better understand how safe it is and how well the therapy may work for adults.

If you are living with SSc, IIM or AAV, you may be able to take part. Joining a study is a personal choice and learning more can help you decide if it feels right to you.

SAFETY INFORMATION:
Clinical studies help determine if investigational therapies are safe to use and work to improve the health of people. Before any medication can be approved and made available to the public, it must go through several phases of clinical research and governmental review. Clinical studies are closely regulated to protect all participants. All rules and ethics that apply to standard medical care also apply to clinical studies.
