

Do you want a headset which not only delivers crisp, clear audio but also ticks all the boxes a gamer could ask for? The HyperX Cloud Alpha meets these criteria and makes communication within the gamer world easier and that much more immersive.

The HyperX Cloud Alpha headset delivers comfort, quality sound output and a sleek, clear microphone which makes it perfect for gamers around the world.

With their lightweight aluminium frame this headset offers stability and comfort without feeling flimsy or weak. Their structure, with its memory foam ear cushions means you can wear them for long periods of time without your ears overheating and more importantly they are light enough that you will often forget you are wearing them when you are in the middle of that intense mission.

The sound quality is very good especially for its mid budget price range and with the dual chamber drivers you receive a crisper audio output which makes hearing minute details such as footsteps even clearer. On top of this having the volume adjustor on the wire makes it easier to adjust the sound depending on the noise level of the room you are in.

The noise cancelling microphone delivers your voice clearly to your gamer friends to ensure communication is constant with no sudden drop outs during those crucial moments.

Both the headset wire and the microphone are removable for easy storage and mobility making them easy to use anywhere, anytime whilst also reducing the chance of cable damage over time. The micro-braided wire has a standard 3.5mm headphone jack so it can be plugged into any controller, audio device or phone

Plus, to top it all off, these headphones can be used across all platforms so whether you are a Playstation, Xbox or PC gamer you can all enjoy the quality sound and design of this headset.
