PayiQ

The Power of Cloud-Enabled Payment Processing is Here

PayiQ delivers automation, scalability, merchant data, and pricing control to ISVs.

PayiQ is a new kind of payment processor. We deliver both modern innovation and full-stack processing—there's no middleman. This allows you to take advantage of our modern feature set without paying a premium price.

We offer tons of key timesaving and revenue-boosting innovations:

Automated Onboarding
Get same-day MIDs for your new merchants using our rules-based approval engine.

Real-time Merchant Data
Monitor transactions and merchant status in real-time thanks to our cloud-enabled infrastructure.

Infinite Scalability
The cloud makes growing and shrinking our payment services easy. This allows us to adapt to seasonal businesses, exponential growth spurts, and unexpected financial challenges.

Automated Chargeback Defense
Our automated system can fight most chargeback disputes without you having to lift a finger. If the chargeback has complications, it'll automatically be routed to you for further review.

Total Pricing Control
Take control of the pricing offered to your merchants. This allows you to enact promotional pricing strategies and increase the price for higher-risk clients—the sky is the limit.

Each of our Innovative new features solves key processing problems that have been plaguing ISVs for years. You'll spend less time managing back-office tasks, so you have more time to acquire new merchants and maximize your current portfolio revenue.

PayiQ eliminates technical headaches and puts the control back in your hands.
