

Tech it to the next level

From lighting to charging to tagging, there are no end of ways in which new technology developments are making life easier in the workplace

WORDS BY
RITA LOBO

Technology is one of the biggest drivers of evolution in the workplace, as we seek to increase our productivity and well-being at work. Luckily, gone are the days when entire floors shared a single temperamental copier, and telephone operators had to schedule long-distance calls.

Today, the smart devices in our pockets are more powerful than the early computers that took up all of our desk space. But, by its very nature, tech is always evolving, and it can feel like a full-time job to keep up with all the latest developments.

For that reason, we've rounded up some of the most intuitive and useful products available to help create healthier, smarter, and more productive workplaces with minimal hassle and investment.

Helios Touch

Helios Touch is a modular, touch-sensitive wall light system that is entirely customisable.

Designed and manufactured in the UK, the system comprises hexagonal LED panels that can be assembled in limitless ways, according to the style and needs of your office.

The lights can be adjusted to any level, as well as to warm or cold temperatures, which makes the Helios Touch a versatile addition that will brighten up and offer healthy light to any environment.

Unlike other smart lights, the Helios is totally analogue, so it does not require a fussy app to operate – just create your design, plug it in and bask in the light. ☺
