

\*\*\*\*\* Rose Stem Cell Peptide Cream - product listing copy

Can using plant-based stem cells/peptides lead to the ultimate Age-Defying Moisturizing Cream?

We have innumerable customers who attest to it. .

As more and more studies demonstrate the effectiveness of plant-based stem cells in skincare, we decided to combine them with our already powerful skin cream to create something unparalleled.

Utilizing the latest findings from our US-based lab, we developed a special formula of Alpine Rose stem cells, peptides (amino acid compounds essential to cells, including the skin), and some amazing natural ingredients of our own.

Alpine Rose stem cells are the most effective for encouraging the body to create needed hormones, especially for aging women. They contain high amounts of polyphenolic compounds, which protect against skin degeneration and in turn help protect and maintain the skin's youthful appearance.

Peptides encourage collagen production to help manage wrinkles and reverse the signs of aging.

To round these two star players out, we add a variety of powerful natural and organic ingredients, like aloe vera, coconut oil and more. This results in a truly fabulous cream that will quickly help make you look and feel younger.
