

TELLTALE SIGNS IT IS TIME FOR AC REPLACEMENT

Most homes in St. Louis have windows closed during summer to keep the cooler air from their [air conditioner unit](#) trapped. These units always require routine maintenance to keep them functioning.

Energy bills may rise tremendously because of a non-functional AC, which may frustrate the homeowner while trying to make a comfortable home. The best way to make your air conditioner last for a long time before it is replaced is to ensure its operational efficiency, which gives rise to the need for servicing and maintenance to keep it running smoothly. Though they are not designed to last forever, there are signs to look out for, knowing when you need AC replacement before it becomes an emergency.

Suppose your unit exhibits any of the following signs. In that case, it may be time for a replacement - and if you need AC replacement services today, Contact the experts at Galmiche & Sons, an [HVAC Company](#) located in St. Louis or Call us at 314-993-1110, and we'll take care of your need.

5 Signs it is Time for AC Replacement

- **Frequent Breakdown** - If your unit breaks down frequently, you must consider a replacement. Though the AC replacement may cost more than the repair, it is the most cost-efficient option because all the money spent on repairs will be better spent on a replacement.
- **High or Low Humidity Level in your Home** - An air conditioner helps manage humidity levels for optimum comfort. Still, if moisture accumulates around the windows, the unit may not dehumidify your home correctly. If your home has mold problems without any damage to water outlets, humidity may be the cause. Also, the unit may malfunction if the humidity level is too low, and you need an AC replacement.
- **Increased Energy Bills** - If you suddenly notice an increase in your utility bills while you haven't changed how you use your air conditioner, it may not be running efficiently anymore, and you need to consider replacing it. Air conditioners with a high SEER rating of 14 use less energy but are more efficient.
- **Your unit is over a decade old** - The working lifespan of air conditioners is ten years before replacement. If yours has reached or is close to the end of its lifespan, you should start planning for its replacement. Saving for a new one now will help you avoid an emergency in case of a sudden breakdown. Remember, there are benefits to replacing an old AC unit with a new energy-efficient system.
- **There's no cool air** - Poor airflow and inefficient cooling are signs that your unit needs servicing. If your AC is not blowing cool air while running efficiently, though adequately maintained, you may need AC replacement. If you want to be comfortable with cool air in your home, get your AC unit replaced now.
