

One Platform. Smarter Operations. Better Care.

Transforming healthcare foodservice and retail into seamless, safe, and personalized experiences

The Cost of Disconnected Systems

Running healthcare foodservice and retail is harder than ever. Disconnected systems can create costly errors, risk patient safety, and drain staff time. Updating a single menu item requires manual changes in each system, causing delays and mistakes.

By unifying patient nutrition, foodservice and retail into a single platform, you can streamline operations, enhance accuracy, and deliver elevated experiences for patients, visitors, and staff.

The Power of One: Unifying Foodservice and Retail

The Power of One brings **NetMenu** and **Quickcharge** together into one unified cloud platform that runs your entire ecosystem. No more workarounds or double entries. Just safe, personalized meals for patients, convenient cashless payments for staff and guests, and actionable insights that help you plan smarter and run more efficiently.

Connect with an expert now and learn how the **Power of One** can help you run smarter operations across every location.

Turning Power into Performance

Optimize Procurement

Stop overspending with automated contract compliance and smart substitutions that maximize discounts and make the most of every deal. Combine retail sales with patient meals served for more accurate forecasting so you have the right inventory on hand when and where you need it.

Offer Personalized Dining

Integrated EHR data ensures diet and allergen needs are met, so patients can safely choose their meals. Visitors and staff can enjoy the flexibility of ordering on kiosks, mobile, or in person with cashless payment options.

Maximize Efficiency

Update once, update everywhere. If an out-of-stock item causes a menu change, one update flows automatically across patient ordering, self-service kiosks, mobile ordering, and POS, eliminating duplicate data entry, reducing errors, and giving staff more time to focus on care.

Gain Actionable Insights

Turn accurate data into informed decisions. End-to-end visibility shows what sells, what gets wasted, and where to cut costs, helping strengthen margins and simplify compliance.

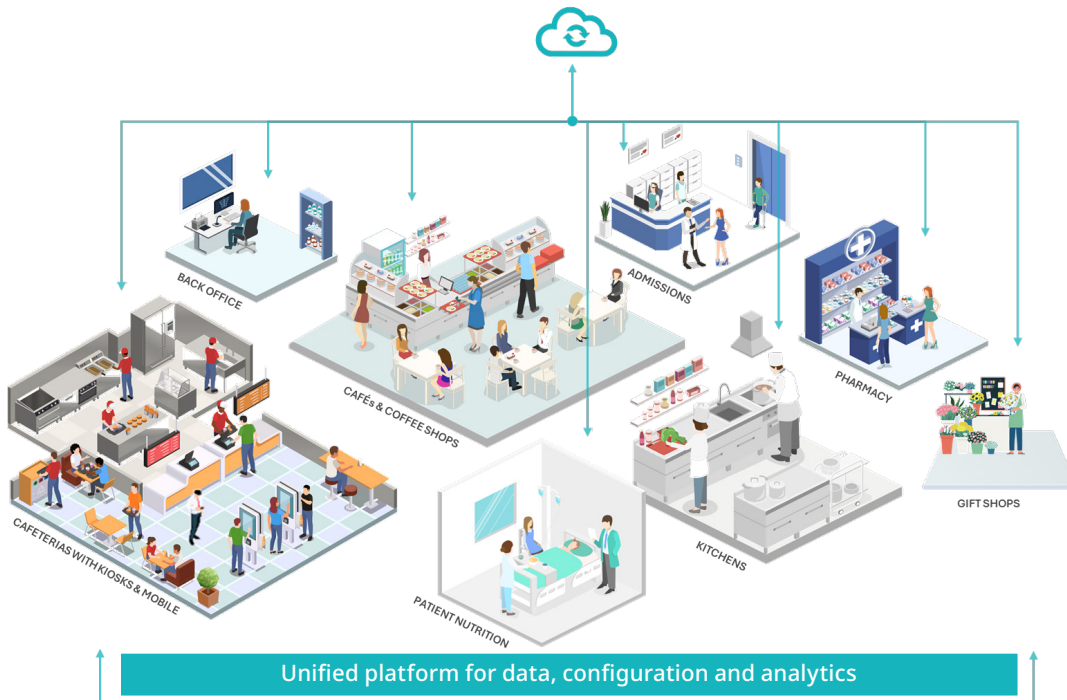

NetMenu: Safe & Efficient Menu Planning

- Menu Planning
- Recipe Management
- Procurement
- Food Preparation
- Patient Feeding
- Waste Tracking
- Nutrition & Allergens
- Patient Ordering
