Don't Let Water Wash Away All Your Hard Work

When specifying concrete waterproofing, you need a solution that's reliable and permanent. Without it, your concrete waterproofing is at risk of failing and letting water erode and corrode the concrete that it was supposed to protect. Reduce the risk of waterproofing failure by reading through our latest specification guide, which will take you through the four key components to better concrete waterproofing specification.

A New Year Calls for New Green Strategies for Construction

While many in the industry are already looking at ways to make concrete itself less carbon-intensive, there also needs to be a focus on reducing the rate of consumption in concrete construction. Currently, the industry produces millions of tonnes of waste. Builders and designers can mitigate this by taking certain circular
