A Contractor Manager Solution for Any Step of the Way

Driving safety programs is a core component of every Safety Leader's day, reflecting the fact that both employees and contractors on a site depend on having a quality safety program that actively works to reduce risk at every point of their on-site work activities.

Maintaining a high level of safety with contractors can be especially important for businesses that utilize contractors on a weekly or even daily basis. Even if your use of contractors tends to be fairly infrequent, having a strong program ensures that their safety is just as well taken care of as your everyday team members. With a digital solution, managing contractors can easily become a part of your daily activities. Going digital means that the information you need is always with you on smart devices and tracking the activities from the start to end of a job can be done in real-time.

Contractor Manager from Gensuite takes this idea of a digitized platform and gives you all the features you're looking for! Whether assigned a discrete project task or working on-site on a regular basis, Contractor Manager is able to manage that worker's journey from beginning to end while maintaining their safety and measuring how well they're able to perform at your workplace.

What part of the journey is your team on with your contractor management program? According to a recent study from NAEM:

> **While 24% of responding companies currently have an ad hoc or developing program, 76% of responding companies aspire to move towards an advanced or strategic contractor safety program within the next 2-3 years.**

What step of the journey is your team on with implementing contractor management software? Whether you're currently utilizing an ad hoc program just getting off the ground or a something a bit more advanced, Gensuite's Contractor Manager is able to bring features to your team that can improve your solution to better your contractor safety program.
What Kind of Solution do You Have?

Finding a solution right for your team's contractor manager program means first determining where you are in your journey. Wherever you are, the Gensuite solution provides enhanced transparency for your team from the beginning to end of the contractor journey. With the ability to track what potential contractor is qualified, what training and qualifications they bring to the table, the projects they are actively working on, post-project performance and digital follow-up with reports made from data mining. See where you fall and find out how application modules from Gensuite's Contractor Manager suite can help your program get to where it needs to go.

Ad Hoc:

If your team is working with an ad hoc level contractor manager program or is working on developing one, Gensuite's Contractor Manager application module has benefits that your team is looking for. The best place to start with a contractor manager solution is cementing a process to properly vet contractors who are right for the job.

Once vetted, putting a process in place to define their roles and responsibility will help keep them on track throughout the duration of the job.

- Search a repository of qualified contractors
- Choose a candidate based on past training and qualifications they meet
- Define roles and responsibilities for contractor tasks and projects

Advanced Program:

You have the basics and you're working on creating a more strategic and integrated contractor management process, Gensuite has the tools perfect for achieving more. Utilize a digital solution to continuously monitor current projects and activities your contractor is working on.

Track their performance with data mining and be able to effectively follow-up and perform correct actions if necessary.

- Monitor active on-site contractor projects
- Trend contractor's work and safety performance
- Follow-up with corrective actions & metrics
