## Core Network Upgrades

### Increased capacity, improved speed and better QoS

We are making significant investments in our core network to ensure you are able to enjoy the latest broadband services, technology, and usage trends. Our latest network upgrade will deliver a number of benefits, including:

#### ✓ Greater capacity and scale

Last month, we activated new transit and peering in our Melbourne data centre providing a more direct path for Melbourne internet services. This means greater capacity, scale, and improved customer experience through shorter paths and lower latency.

#### ✓ Improved routing efficiency and service quality

Over the last several months, we significantly optimised our network to improve routing efficiency and the quality of service for our customers.

#### ✓ Faster response time and network incidence resolution

Our network monitoring has been enhanced enabling our engineers to respond faster and resolve network incidences with greater speed and efficiency.

#### ✓ Guaranteed QoS for voice services

We are guaranteeing quality of services for all GCOMM PBX and SIP services deployed over our MPLS network.

#### ✓ >1Gb customer services and colo ethernet ports

GCOMM now supports more than 1Gb services and colocation ethernet ports.

#### GCOMM NETWORK UPGRADE FUN FACTS

- ✓ 32 routers deployed
- ✓ 1,000 services migrated to the new infrastructure
- ✓ 1,800 man hours dedicated to the network upgrade
- ✓ The number of transit and peering points increased from 7 to 15
- ✓ Network capacity increased more than 20 times
- ✓ Network scalability increased more than 100 times
- ✓ Established direct peering relationships with content providers: Microsoft, Google, Amazon, Apple, Softlayer, and others
