- Patient never has to leave their home
- No COVID-19 Exposure Risk
- Low Out-of-Pocket Cost

**OSAinHome<sup>SM</sup>**

# Our cloud-based technology provides sleep study results before breakfast.

## The First and Only Disposable HSAT

“The most important part of sleep apnea care begins when your patient removes their CPAP from the box. OSAinHome<sup>SM</sup>, a division of Sleep Centers of Middle Tennessee produces almost twice as many long-term CPAP users as others. This is how we measure quality.”

**WILLIAM H. NOAH, MD**

Medical Director, Sleep Centers of Middle Tennessee  
Chairperson, MTSU Sleep Research Consortium

For more information about our protocols and outcomes data, visit **OSAinHome.com**

OSAinHome<sup>SM</sup> is only for patients suspected of OSA. Patients with inconclusive home sleep apnea testing, neuromuscular disease, moderate/severe cardiovascular or pulmonary disease, central sleep apnea, hypoventilation, severe insomnia, or other complicating issue may require in-lab polysomnogram. This program is not indicated for children. Patient cooperation is required to complete process in 5 to 7 days. Delay in treatment may occur with certain insurance plans. 5 to 7-day timeframe is only for patients choosing CPAP as treatment.
