Zone in on zero harm™

Fight the spread of pathogens with a **3-zone prevention** strategy.

[Learn more](#)

Create a culture of safety and prevention

Every day, frontline leaders are challenged to prevent the spread of infectious pathogens. There are many ways pathogens can cause infections. Through contaminated surfaces, air and water. By touch and bodily contact, and through invasive procedures.

The key is inspiring everyone to take ownership and helping them understand the vital role they play in preventing HAIs across your organization. **Our 3-zone strategy covers the entire perimeter of risk.** It emphasizes people, process and product to help keep everyone in the facility safe.

See our solutions in action:

Drive sustainable outcomes with best practice guidance

Our experts partner with you to identify practice gaps and opportunities for standardization—no matter the area or focus. We use the findings to optimize product accessibility, helping you improve compliance and outcomes.

Build good habits with education and training

Patients. Staff. Bedside caregivers. Stopping the spread of infection is everyone's responsibility. But everyone may not always have the right information to consistently prevent HAIs. We offer educational resources for any need, learning style and skill level.

Support best practices with the right system of products

We work closely with you to build the right mix of products to meet your facility's unique needs. The goal: make it easier for staff to do the right thing, helping improve patient care and control costs.

Case Study

Discover how peer-to-peer education helped Nebraska Medicine significantly reduce CAUTI rates in the ICU.
