## Property Management Solutions : All Inclusive Blockchain Networking

There are many property management software options available online today that offer services for just about any segment of the real estate industry. However, many of these software options are niche-specific, expensive, and still surprisingly inefficient.

Premier or silo-based management software models have been replaced by cloud-based platforms that provide an “all-in-one service” that outperforms any offline software options. However, moving offline infrastructure to the cloud isn't enough to keep up with today's rapid technological advances. Much of what's available on the market still misses the mark of creating a truly efficient system designed to manage all property management aspects.

Networks of contractors, vendors, owners, tenants, property managers, and financial institutions are still disconnected no matter how streamlined or inclusive cloud services today are. Concerns over climate change, technological advancement, and new generations of consumers have sparked a need for businesses to transform to more circular economic models. This isn't to say current software doesn't do its job, only that the opportunity to provide a truly all-in-one property management experience has not been met.

The introduction of the first blockchain used as a platform to host Bitcoin captured the essence of upcoming technological record keeping and transactional mediums. The many unnecessary extra steps to purchase and manage real-estate no longer has to be an issue we ignore for lack of a better way.

Vault Innovation Technologies offers an innovative solution built to address the concerns of property managers, individual owners, large enterprises, and government bodies who still find that their critical information and systems are disjointed. The approval times for funding and operational speeds are still slow, and third-party authentication is tedious and costly.

Using blockchain technology, Vault Innovation Technologies drastically improves speed, security, cost, and transparency, while building actionable reports that react with the blockchain's efficiency and builds upon those efficiencies with integrated AI.

Some of the real-time analytical reports, verified and authenticated by the blockchain include:

- BI
- Deal Management
- Real-Time Energy Expense Management
- Maintenance and Vendor IQ and Communication
- Forecasting
- Payment Services
- Accounting

Vault Innovation Technologies offers the only open-source software designed to integrate all of the growth in property management software from the past ten years with modern tech that creates an intuitive and learning experience that promotes business growth, ease of access, and peace of mind.
